

SELF-MONITORED

When monitored by a carer, friend, or family member, the watch will call your chosen carer when an emergency alert is triggered allowing that person to speak directly to the wearer.

How does it work?

K.I.T will be programmed to call a carer, as well as send an alert to up to five authorised family members or friends via SMS and/or email, providing them the last known GPS location of the watch.

Carers may also call the device to speak to the wearer via the two-way speech function on the device.

At any time as a carer, you can login to the Online Client Console or Android App using a secure name and password. This will enable the user to view the wearer's location and alter the settings to customise the watch to the needs of the wearer.

24/7 MONITORED

Your K.I.T Personal Safety Device can also be monitored by a 24-hour monitoring centre .

How does it work?

Each device is supplied and installed with a pre-configured sim card. The dedicated alert (SOS) button is programmed to contact the response centre, which will quickly assist via the handsfree phone feature of the device while viewing the wearers location.

The response centre can contact emergency services or the nominated responders to attend, depending on the wearer's needs.

LOCKING STRAP

The locking strap accessory can ensure that the watch is not removed by the wearer or someone else. A removal alert can be set up to notify contacts via SMS and email.

FOR PEACE OF MIND MADE SIMPLE
**KEEP IN TOUCH WITH A
K.I.T CONNECTIVITY
SOLUTION.**

MOBILE PERSONAL EMERGENCY RESPONSE SYSTEM

K.I.T is a Mobile Personal Emergency Response System (mPERS) that works anywhere there is mobile phone coverage, and offers two way (hands free) voice communication, a panic alert, fall detector and assists to locate the wearer using GPS.

K.I.T is with you where-ever you go. Keeping you in touch with the people that matter. With easy to use to use functions and simple set-up, K.I.T uses its own SIM card, allowing connection to a mobile network without the need for a separate mobile phone.

K.I.T incorporates a stand-alone mobile phone so you can always stay in touch. It can be set up to automatically answer calls should the wearer not be able to press buttons. This ensures the device is the easiest solution to use for the wearer, providing them with peace of mind everywhere they go.

K.I.T provides independence for the wearer and also independence for carers and family members, knowing that they can keep in touch with the K.I.T connectivity solution.

At any time an approved user can login to the secure Online Client Console using a secure user name and password to keep connected to the wearer. K.I.T can also be monitored by an external monitoring centre for 24/7 support and response.

Who is it for?

K.I.T is a GPS device for people with a disability to ensure they can connect at any time. It is designed to integrate seamlessly with the wearer's lifestyle, keeping them safe.

MOBILE PHONE FUNCTION

K.I.T has its own SIM and works like a mobile phone. It can call two pre-programmed numbers, as well as the pre-set emergency or monitoring number. You can also call the device from any phone.

SOS ALERT

Press the black SOS button for two seconds and your K.I.T will connect you via a two-way handsfree phone call to your pre-set SOS number or alert a 24/7 monitoring centre while sending your location via SMS and/or email to emergency contacts.

GEO-FENCE

Geo-fences can be easily created to provide notifications when the wearer leaves a designated area or safe zone. These alerts can notify authorised contacts. Area alerts can also be set to advise contacts when the wearer has arrived at a pre-set destination.

FALL SENSOR/MAN DOWN

Should the wearer be prone to falling or have a potential to be in a 'man down' situation, the built-in Fall Sensor will automatically call nominated emergency number and alert authorised contacts via SMS and email, providing both safety for the wearer, and peace of mind for all.

REMINDERS

K.I.T can be programmed using the Online Client Console to show reminders at set times. Reminders include: Medication; Drink; Food and Transport. K.I.T provides the wearer with the option to acknowledge that they have heard or seen the alert.

ONLINE CLIENT CONSOLE

Our easy-to-use Online Client Console allows access to the K.I.T map screen together with the management of device features and functions via web interface or the Android App.

24/7 MONITORING CENTRE

Your K.I.T Personal Safety Device can be monitored by a 24-hour monitoring centre for dedicated support and response.

NON-MOVEMENT ALERT

This can be set to provide an alert after a pre-determined time if there is absolutely no movement detected from the device (excluding when on charge).

EASY CHARGING

K.I.T includes an easy-to-use charger. The magnetised base design ensures the device connects the right way. There's no need to change the batteries or struggle with tiny phone plugs and power cords.

WEARABILITY

K.I.T is compact and lightweight (weighing just 51 grams) and can be worn as a watch, attached to a lanyard or on a carabiner.

IP67 RATING

With IP67 rating K.I.T can be worn in the rain, in the shower or in the bath for up to half an hour to one meter depth.
